

# Pescecol P

## PRODUCTS OF FINING

### Oenological applications

**PESCECOL P** is a preparation of isinglass containing  $\text{SiO}_2$  (E551) and citric acid (E330) for the clarification and stabilization of white and rose wines. It is very powerful at removing particles from suspension in difficult wines. It also improves filterability and stability, producing brilliant clarity.

### Instructions for use

After addition of **PESCECOL P**, aeration of the wine is recommended.

Prepare a 1 kg solution as follows:

Dissolve the mixture in 10 times its weight in water to obtain a homogeneous suspension. Let it swell for 3 or 4 hours. Then add directly through pumping over.

### Dose rate

0,75 - 3,0 g/hL

NB : these doses are given as guidance only.

You should always carry out a laboratory test beforehand.

### Packaging and storage

Packs of 1 kg

Store in a dry environment which is well ventilated at a temperature below 25°C.

Once the packaging is opened, **PESCECOL P** rapidly loses its efficiency and should be used quickly. The recommended use by date is marked on the packaging.
